EXPERIENCE

Full Stack Developer Intern — Sahii **Remote | Present**
Wholesale e-commerce platform

- **Engineered** and shipped **15+ production REST APIs** and server-side business logic in **Node.js/Express/MongoDB**, powering core catalog, cart, and order workflows for a live wholesale e-commerce platform.
- Integrated **Prisma ORM** with MongoDB for type-safe database access and **schema/data modeling**, cutting query-development time by **~30%** and reducing runtime data errors by **~25%**.
- Built typo-tolerant, relevance-ranked product search using **Meilisearch and Fuse.js**, and optimized MongoDB queries, reducing average search response time by **~40%** and improving result relevance.
- Automated procurement workflows via a **Vendor Management System (VMS)**, using a **message queue** to sync orders in real time between the e-commerce platform and the VMS, cutting manual order-entry effort by **~50%**.

Web Developer — Phi Launcher **Oct 2025 – Nov 2025**
Freelance | Remote

- Engineered responsive, reusable UI components with **React.js** and **Tailwind CSS**, integrating **10+ REST APIs** to deliver scalable, mobile-first interfaces.
- Optimized frontend performance by cutting bundle size by **67%** and boosting the **Lighthouse score from 60 to 99**, shipping production-ready features in a fast-paced startup environment.

PROJECTS

Mendly — Electronics Repair Service Platform Live | GitHub
React, Node.js, Express.js, MongoDB, Socket.IO, Razorpay, RAG, Pinecone

- Architected a full-stack repair-service marketplace connecting customers with verified providers across **3 RBAC roles**, with booking management, live chat, order tracking, and reviews.
- Implemented **JWT access/refresh authentication** with httpOnly cookie sessions, Redux state management, and rate limiting **(100 req/15 min)**, deployed on **Azure Web App** with **sub-150ms average API response time**.
- Created a **RAG-powered support chatbot** using the **Groq API** and **Pinecone vector database** to deliver low-latency, context-aware responses to customer queries.

Chaos Proxy — HTTP Fault-Injection Proxy GitHub
Node.js, TypeScript, Express, React, Socket.IO, WebSockets

- Developed an HTTP fault-injection proxy from scratch on raw **Node.js streams**, handling concurrent connection forwarding, asynchronous I/O, and error recovery without a framework.
- Designed a **triangle-wave fault degradation model** with a live pipeline computing **p50/p95/p99 latency** and failure-rate metrics.
- Delivered a **threshold-based assertion engine** that auto-halts fault injection on latency or failure-rate breaches, paired with a **React and Socket.IO dashboard** visualizing telemetry via **Recharts**.
